WE ASPIRE TO CREATE
THE FUTURE OF ANIMAL
WELL-BEING THROUGH
PREVENTIVE CARE.

*The Boehringer Ingelheim Animal Health Business Unit
is a global leader in animal health. We are part of
Boehringer Ingelheim, a multinational, family-owned
company, founded in 1885.*

**Our work is guided by a passionate
belief in a future in which no animal
suffers from a preventable disease.**

We discover, develop and manufacture
vaccines, parasiticides and therapeutics,
complemented by diagnostics &
monitoring platforms. We strive to go
beyond medicine to better predict,
detect and prevent animal diseases
before they arise. Across the globe, we
work to meet the growing demand for

protein and greater needs for animal
companionship. With our innovative
solutions, our highly-skilled employees
support farmers, veterinarians and
companion animal owners who raise
and deeply care for their animals.

Humans and animals share a
fundamental bond, and as animals
play an increasingly significant role
in our lives, we believe in prevention
over treatment.

KEY FACTS

We create the future of animal well-being through preventive care

A global leader in vaccines

A global leader in parasiticides and therapeutics

Partner of choice for industry bodies, scientific institutions and universities

#1 Global market position in Veterinary Public Health

Boehringer Ingelheim commitments

Be green

Committed to continuously reducing the company's impact on the environment

Be safe

Committed to reducing the number of workplace incidents as health and safety of our employees is our priority

Be sustainable

Committed to supporting the UN's sustainable goals (SDGs)

April 2019

WE PARTNER FOR SUCCESS

We strive to be a partner of choice in this exciting yet ever-changing animal health industry.

We collaborate with key industry partners, emerging start-ups, academia and world-class scientific institutions that share the common interest of improving the health of animals and advancing animal care.

Our global Business Development team and our Research & Development team receive more than 300 external opportunities annually. We understand the urgent need some of our start-up partners have for support and thus

have put a robust review process in place with the goal of responding to potential partners within 30 days of submission.

We believe that collaboration and shared innovation can lead to ground-breaking solutions to better predict, prevent and detect disease. Our partnerships combine complementary talents and expertise. In addition, they leverage new technologies and science, resulting in the development of comprehensive, long-term, innovative solutions for animal health where they are needed most.

WE CONTINUOUSLY INNOVATE

Our global Research & Development team delivers advanced, preventive animal healthcare, helping veterinarians, companion animal and livestock owners as well as public health officials around the world improve animal health today and in the future.

Our commitment to innovation means that we focus on ensuring excellence in efficacy and safety for new products and delivery systems as well as extending the benefits of our existing products by adding new species or claims. We work across geographies and species to deliver a robust innovative pipeline of safe and effective vaccines, therapeutics and parasiticides for companion animals and livestock.

We also bring expertise in IT and digital platforms and look for partnerships with digital innovators, with the ultimate goal to provide new and convenient solutions to our customers. We are a leader in parasiticides and currently working with world-class institutes worldwide on ground-breaking scientific solutions.

Our deep-rooted collaboration and synergies with our human pharma business enable us to bring forward new first-in-class therapeutics with a breakthrough potential. In addition, we focus on digital platforms which offer our livestock customers and companion animal owners a holistic and integrated approach to prevent disease and improve animal welfare.

WE DEVELOP TAILORED SOLUTIONS

We closely work with our customers, developing tailor-made solutions for them, anticipating their future needs, helping them grow their business and succeed.

All our customers, be they farmers, veterinarians or companion animal owners, can rely on our expertise and

our profound knowledge of the market including its opportunities and challenges. As a trusted partner, we bring value and provide differentiated services through our daily efforts and our passion for animals. Customer feedback is important to us – it enables us to fully understand our customers' needs and respond to them.

WE CARE

We are committed to making a difference in the world. As a sustainable business, we embrace a focused and comprehensive corporate responsibility approach, aligned with our strategy.

Through our actions, we strive to address the most pressing sustainability challenges: disease emergence, rising consumers' concern about animal welfare and food safety, growth in demand for animal protein, and the impact of environmental degradation, among others. Our positive impact can go beyond our products and services. Therefore, we work tirelessly to help expand access to responsible animal healthcare, promoting food safety and educating communities worldwide on the importance of prevention.

We take effective steps to minimize our environmental footprint by developing sustainable packaging and implementing best practice to limit the environmental impact, among other initiatives. We support organizations around the world that recognize the power of the human-animal bond and its positive effect on both humans and animals.

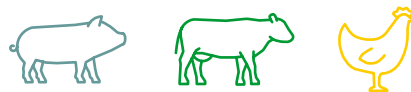

OUR DIVERSE PORTFOLIO – LIVESTOCK

Our livestock business (poultry, cattle, swine and Veterinary Public Health) is driven by innovative solutions for parasiticides, vaccines and therapeutics that prevent disease in livestock. We have a history of collaborative partnerships with livestock producers, livestock veterinarians, government officials and NGOs.

We help livestock customers produce more high quality and safe food using fewer natural resources. In addition, we strive to address some of their key challenges, such as the need for

cost-effective production of more protein to feed the world's growing population. In response to an increased public health concern over antibiotic resistance and food safety, we focus on developing solutions that prevent or reduce the use of antibiotics, improve the quality and safety of our food and contribute to animal well-being.

We are here to help our customers tackle these challenges with preventive care solutions and increased focus on point-of-care diagnostic technologies, live biotherapeutics, and digital solutions.

OUR DIVERSE PORTFOLIO – COMPANION ANIMALS

As the number one global player in the pet and equine markets, we help provide longer and healthier lives for companion animals. We are committed to enhancing our pet health solutions and growing our leadership position throughout the world while continuously having animal well-being as our top priority.

More than ever before, companion animals are considered an integral part of the family, and their owners are paying closer attention to how they manage their animals' health and prevent illness. They are also seeking health care solutions through new

channels, such as websites and mobile apps. We monitor and respond to these trends to ensure we address our customers' needs and provide our services whenever, wherever and however they are required. We build upon our longstanding success in veterinary medicine to create advanced, preventive health solutions that continuously adapt to the developing needs of both our partner veterinarians and companion animal owners.

In addition, we are expanding our activities in new segments such as dental care, dental hygiene and live biotherapeutics.

WORKING AT BOEHRINGER INGELHEIM

Diversity is our strength. We nurture a diverse, collaborative and open work environment which appeals to the best people and where people feel valued for the work they do.

We welcome the differences of our people and their diversity of thought. We are convinced that it is an enormous asset to our innovation and success. Colleagues in approximately 150 countries work together for the

common purpose and with passion for animal health. We invest in our people and offer exciting opportunities for them to learn, grow and develop professionally as well as personally. We treat each other with respect, trust and empathy. Our ultimate goal is to become an employer of choice for all professionals who share the same passion for animals, drive and commitment to make a positive difference in the world.
